THE GLOBAL STAIRLIFT COMPANY

Making life easier

Just because we expend more energy doing everyday tasks, as we get older, does not mean we need to limit our ability to enjoy a more contented lifestyle.

From time to time, climbing steep stairs can be awkward and physically demanding for some people.

Designed and built to the highest standard

Manual/power swivel seats help you get on and off at the top of the stairs

Stand/perch option for people who have difficulty bending their knees

Easy use joystick for finger light control. For added safety the emergency holding switch stops the lift instantly if pressed

Folds away neatly and out of the way when not in use

Footrest raisers help to fold the lift away without bending down

Powered hinges for use near doorways and passageways

The external lift is ideal for patios and cellars

ICS diagnostics provide operational and service information

Pressure sensitive edges stop the lift in the event of an obstacle

Safe, reliable and easy to use

Why take needless risks climbing steep stairs when you can use a stairlift?

A stairlift is an excellent product designed to simply provide an easy and convenient way of accessing upper floors quickly and safely, whenever required.

The D160 MediTek stairlift has been developed specifically for domestic application and will fit unobtrusively and gracefully into your home.

When not in use, the D160 stairlift can be folded away and with a slim profile will not obstruct the stairway for use by other people.
